

**Amendments to the Abstract**

**Please amend the abstract as follows:**

A twin roll caster for an apparatus ~~Apparatus~~ for confining the impurities in a molten metal fed by means of a discharger and contained into an area (3) of a strip continuous casting mould delimited by the side surfaces of two casting rolls with counter-rotating horizontal axis (1a, 1b) and by two containment side plates (2a, 2b) positioned in contact with the rolls' bases, ~~comprising is provided.~~ The apparatus includes a discharger (4) having at least two first series of holes (4a, 4a') for the molten metal supply, each series being formed by at least a pair of holes respectively directed towards one of the opposed side surfaces of the two rolls (1a, 1b) and at least a second pair of holes (4b, 4b') for the molten metal supply, each hole of such second pair being directed towards the side plate nearest thereto, and said at least one second pair of holes (4b, 4b') being positioned at a greater depth with respect to said two first series of holes (4a, 4a'), and at least two pairs of barriers (5) present in one part of the area (3) comprised between the end of the plungernozzle and the containment side plates (2a, 2b), forming the cross-sections of said barriers therebetween, lying on a same horizontal plane, an Y angle. The figure 1a shows the cross-section of an embodiment of the apparatus according to the present invention.
